

MyAIAgent Stock Bot — User Handbook

What is MyAIAgent?

MyAIAgent is a personal RSI-based stock research and paper-trading platform. It screens 60 stocks across 10 sectors and flags candidates where RSI signals a potential reversal.

How the Screener Works

The screener applies one validated rule: exclude stocks with a 10-year buy-and-hold return above 300%. Strong-trend stocks produced 0 RSI wins across 22 tests. The remaining candidates are sorted by current RSI.

Two Signal Tracks

Track A (Entry Signal): RSI below 30 and slope turning up. This is the primary validated entry condition.

Track B (Experimental): RSI between 30 and 40 with slope rising. Not yet validated — log separately from Track A.

Trade Rules

1. Stock appears in the Screener.
2. RSI is below 30 at entry (Track A) or 30-40 with rising slope (Track B).
3. 10-year buy-and-hold return is below 300%.
4. Sector is not Airlines.
5. Enter paper trade and log a one-sentence note.
6. Exit when RSI rises above 60.

Goal

Complete 20 to 30 closed paper trades before considering real money. All thresholds are frozen during the validation period.
